

Data Integration and Application Consulting Services

YOUR DATA IS OUR BUSINESS

A **solid technical infrastructure** and **cohesive data integration** along with custom tailored application design among systems provide the foundation for your business. Proper architecture and optimization drive the performance, stability, and security of your systems, thus giving end users an experience of application reliability and quick responsiveness. **Speed and consistency are essential** – a faster, better integrated system instills trust. It's critical that the right architecture, optimization and integration processes are in place to maintain that confidence.

Our staff of veteran data integration and application experts boast over 25 years of combined experience in delivering these integration systems and solutions. We believe that in deploying efficient, controlled, consistent integration among systems provides the accuracy and reliability that users need to perform their tasks and provide meaningful information. Replacing manual procedures with backend automation significantly speeds up processes and closes the loop on user error and data scrubbing. This will allow for your business to focus on analysis and business functions as opposed to data movement. **Data integration is more than just data movement.** At iArch Solutions we deploy step by step integrations that create a digital footprint to your business process flows. This results in clean data from the onset that can then be analyzed at the application level.

PRODUCTS SERVED:

iArch Solutions provides application consulting and support services on the following Oracle Hyperion Enterprise Performance Management (EPM) products:

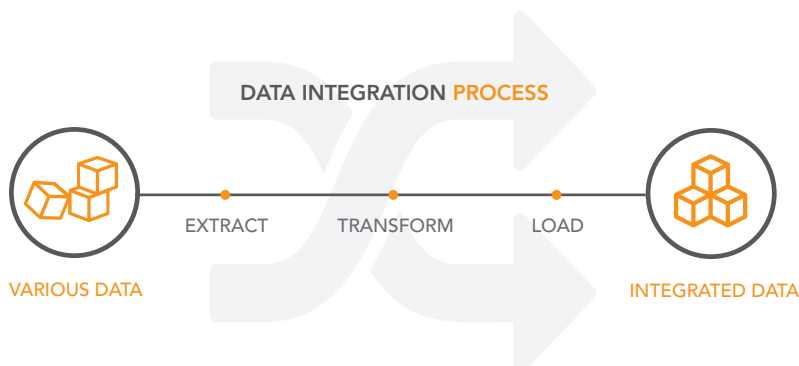

Financial Close and Consolidation

- » Hyperion Financial Management (HFM)
- » Hyperion Enterprise
- » Financial Close Management (FCM)
- » Close Manager (CM)

[more >](#)

INTEGRATION SOLUTIONS:

Finance teams can gain better access to source data through Data Integration (DI) when using Oracle's suite of next generation DI tools. Products like Oracle Hyperion Financial Data Quality Management Enterprise Edition (FDMEE), Oracle Data Integrator Cloud Services (ODICS) and Enterprise Data Management Cloud Services (EDMCS) help transform data and metadata from a variety of sources and creates a data flow to populate Hyperion products through integration with Enterprise Resource Planning (ERP) systems, as well as other data sources.

Whether on-prem, cloud or in a hybrid deployment model, our expert Consulting team at iArch Solutions helps our clients build integration solutions which will allow:

- > Source System Direct Connection and Pull Integration
- > Drill-back to Source and Transactional Systems
- > Downstream System Integration
 - Data Loader Process Flow and Experience
 - Triangulation Accelerator
 - Master Data Governance
- > Shortened development time
- > Reduced user complexity
- > Communication across platforms
- > Interface to multiple data sources
- > Support of real time data capture and transformation
- > Increased insight with drill downs

Contact us today and let us help you unlock the next level of **Financial Analysis and Data Integration for your Enterprise!**
